Notice of Activity Suspension by Binder

2025.8

Due to the fact that the vast majority of members within the Binder group are about to face tremendous academic pressure, Binder will suspend all project development and community activities starting from September 1, 2025 (it is not ruled out that some members within the Binder group will carry out development activities on their own). The specific content is as follows:

- Suspend the updates of personal and collaborative open-source projects such as the Baihua Client, Baihua Server, and Rust Constructor;
- All members are no longer active on social media and the open source community;
- The recruitment of new members may be suspended.

It is expected that Binder will briefly resume development for one month in early 2026 and the suspension will end in late June 2026.
